MISCELLANEOUS INSTRUCTIONS

REPLACEMENT OF DOO STATION EQUIPMENT AT KENT ROUTE STATIONS

FROM WEDNESDAY 01 MAY 2024 UNTIL WEDNESDAY 01 MAY 2028

*****PLEASE NOTE THE END DATE HAS BEEN EXTENDED SINCE FIRST PUBLISHED*****

Driver Only Operation (DOO) equipment is gradually being replaced. The work mainly entails replacement of monitors and occasionally metalwork such as camera housings and monitor housings with new units at Kent route stations

Work will be undertaken between trains booked to call, or during white periods overnight.

Any queries should be directed to either Darren Goodall, or Doug Mackenzie – NR DOO Section Managers Kent.

(D/5341 – D20688) (27/04/2024) (UFN)

SECTION D – GENERAL INSTRUCTIONS AND NOTICES

Items marked thus will not appear in future issues and a note must be taken of them by all concerned

A thick vertical line denotes new or amended items

MISCELLANEOUS INSTRUCTIONS – Continued**MISCELLANEOUS INSTRUCTIONS****CLASS 153 VEHICLES FITTED WITH SANDING EQUIPMENT – (THIS NOTICE APPLIES TO THE LNW(S) ROUTE ONLY)**

Class 153 rolling stock are fitted with sanding equipment which the Driver will operate when it is necessary to stop the train in emergency, and / or during experienced conditions of very low railhead adhesion.

Each driving cab is fitted with the ability to supply sand which can be discharged and laid by the following methods:

- sand application manually operated during Brake Step 3;
- sand application automatically delivered during Emergency Braking; and
- sand application manually operated during Traction (e.g. train acceleration)

The application of sand by any of the above methods does not require the train to be removed from passenger operation / service, unless otherwise in circumstances advised by the Driver.

Driver's Actions

When the manual sanding equipment has been used at a speed below 10mph under braking conditions, the train must be brought to a stand and the Driver must inform the Signaller immediately and report the following:

- e) that the manual sanding equipment has been operated; and
- f) the location where the equipment was discharged and the current location of the train

If the Signaller cannot be contacted immediately via the signal post telephone, GSM-R radio, the Driver must place a track circuit operating clip on the line immediately in front of the train. To avoid delay, if the Driver alights to use a signal post telephone, a track circuit operating clip should be taken as well.

The Signaller may instruct the Driver to place a track circuit operating clip on the line immediately in front of the train.

When the Signaller confirms that the train has been protected, the Driver must provide the following additional information:

- why the equipment was operated i.e. whether for a genuine emergency, system fault or operated in error
- the location of poor railhead adhesion (where applicable) which required the sander to be operated; and
- the units and vehicle number on which the sander was operated

When the train is ready to proceed, the Driver must obtain the Signaller's authorisation before moving the train. When a track circuit operating clip has been used, the Signaller's permission must be received before removing it from the line.

Signallers Actions

On receipt of a report from a Driver that the emergency sanding equipment has been operated on a unit, the Signaller must immediately:

- R1 place or maintain the signal in rear of the train at Danger; and
- R2 advise the Driver when the train is protected and record the information provided (on Bi-directional lines, protection must also be applied to prevent the approach of trains in both directions)

When it has been ascertained from the Driver that the train is able to proceed, movements may re-commence. Where applicable, the Signaller must instruct the Driver to remove the track circuit operating clip prior to the train proceeding. The next controlled signal in rear of where the sander was operated must be maintained at Danger behind the first train to proceed through the affected section, until the train has passed clear of the overlap of the signal in advance of where the train stopped and occupied the track circuit ahead. The passage of this first train must be observed to ensure that track circuits work correctly. This method of signalling shall continue until it has been ascertained that the track circuits are working correctly.

Where poor railhead adhesion problems have been reported, the Signaller must also observe Rule Book, Module TW1 – Preparation and movement of trains – General, Section 28 – Rail Adhesion.

The Signaller must inform Network Rail Control giving details of the unit and vehicle numbers, train running details, time and location of the incident and ensure that all details are recorded (train register / occurrence book) and complete a failure to operate track circuit form if applicable.

**USE OF GSM-R TO ADVISE DRIVERS OF AN APPROACHING
TSR DUE TO A HIGH OUTPUT WORKSITE ON THE ADJACENT LINE -
(THIS NOTICE APPLIES TO THE LNW(N) & LNW(S) ROUTES ONLY)**

GSM-R berth triggered messages will be used to pass information to Drivers where TSRs are used when the adjacent line is a live worksite.

TSR boards will be used with the berth triggered broadcast acting as a supplementary message only.
